

FIBER X PRO

TAKING FIBERS TO THE NEXT LEVEL

CREACLEAR SUSTAINABLE FIBER FILTER AID

Separation processes demand clarity, efficiency and safety. CreaClear can be used as a precoat for polishing liquids and preventing the bleed-through of Diatomaceous Earth. As well, CreaClear can be used as a stand-alone filter aid for exceptional purity and clarity. The fibers build a matrix that capture particles while improving flow rates and extending filtration cycles. Cellulose fiber is a natural product and poses no contamination hazards, and it can be easily disposed of by incineration or composting.

Advantages

- Excellent filtrate clarity
- Bridges rips and tears in the filter cake
- Provides long filter cake constancy
- Renewable resource product
- Safe for workers to handle

CreaClear

- SC90 – Fine Filtration
- SC150 - Medium Filtration (RotoVac OK)
- SC200 – Rough Filtration

Maximizing Surface Area

CreaClear is manufactured in a proprietary system that opens and expands the natural fiber for greater surface area. More surface area yields a more complex filter matrix for great particle loading an improved filtrate.

Dosage

Please call or e-mail to address your system requirements.
